Guidelines DIU GranWalking

In our guidelines for the design elements, we are focusing on the main element a website or web application for GranWalking should contain. As an onboarding website, we will have the closest up-coming event, meaning the event in the list of walks that will take place the soonest. This will be agile and changing with the time.

The menu bar will be simple, since we do not offer any products and don't need a shopping cart. The navigation will include Home, Events, my Events, and my Account.

In the Home section, there will be the possibility to search for a specific event.

Events shows all upcoming events, and the user can sign up for events by clicking on a specific event and then clicking the sign-up button. A calendar view is possible.

My Events shows all upcoming events that the user has signed up for. In this menu item, it is possible to cancel participation for certain events.

Under my Account, the account can be managed, as well as settings evaluated and the FAQ can be consulted.

Wizards will be kept to a minimum: the user can sign up or cancel an event they have previously signed up for. Both options only are available when the user is signed in (precondition).

For signing up for an event, the user clicks on the event, clicks on the corresponding button, and confirms the sign-up. After a confirmation message, the user is brought back to the home menu.

For cancelling an event, the user uses the menu bar option "my Events", navigates to the corresponding event, and presses the button "Cancel participation". After successful cancellation, the user will be brought back to the Home page.

We do not have cart items, since we do not provide a purchasable service. All our sign-up events are free of charge. Our items are calendar items, for which the participant can sign up by clicking a button specific for the event.

The About section and the FAQ can be found under the menu item "My Account" by selection of the corresponding items in a whole-screen menu. This menu contains the items My Data, Manage Account, Delete Account, Settings, and FAQ/About.

For tags, we have selected to use a tag that specifies if the walk allows dogs, and additionally a tag that indicates the level of the walk. Finally, we have a tag indicating how long the walk will be, such that everyone can select appropriate walking events.
